EDUCATION QUALIFICATIONS

- **Doctorate (Business Administration Management and Entrepreneurship)**
  Westcliff University, (Irvine, CA (Sept 2020 – Oct 2021)

  Completed four semesters with a GPA of 3.8 before voluntarily discontinuing the program.
  Completed Doctoral Coursework (27 Credit Hours):
  ECO 500 Managerial Economics * FIN 500 Financial & Accounting Skills for Managers * DOC 700 Doctoral Common Foundation * LDR 700 Leadership and Creative Solutions Implementation * MGT 700 Corporate Strategy * FIN 700 Research in Entrepreneurial Finance * MKT 700 Marketing Strategy & Consumer Behavior * DOC 705 Quantitative Research Methods * DOC 710 Qualitative Research Methods

- **MASTERS (INFORMATION SYSTEM ENGINEERING AND MANAGEMENT) Graduated High Honours in 2017 - Harrisburg University, (Harrisburg P.A.) Graduate Course Work (3.86/4.00 GPA)**

  Strategic Information Systems Planning and Engineering * Information and Communication technology principles * Analysis & Design of Modern Information Systems * Information Security Management * Enterprise Architecture and Integration * Principles of Project Management * Business Intelligence/Decision Support Systems * Business Strategy Management Principles * Information Technology Quality Assurance * Web-based Software Engineering * Research Methodology & Writing * Applied Project in Information System Engineering

- **BACHELOR OF SCIENCE (CIVIL ENGINEERING) CLASS OF 2012**

  PULLA REDDY ENGINEERING COLLEGE, Hyderabad, India 2008-12
  (Graduated with Highest Distinction) Award: Recipient of Merit medal for Academic Excellence

CERTIFICATIONS

- **AZ-104-Microsoft-Certified-Azure-Administrator-Associate**
  Credential ID: AZ-104
  Issued by: Microsoft
- **Microsoft Certified: Azure Developer Associate**
  Credential ID: AZ-204
  Issued by: Microsoft
- **Microsoft Certified: DevOps Engineer Expert**
  Credential ID: AZ-400
  Issued by: Microsoft

- **Microsoft Certified: Azure Solutions Architect Expert**
  Credential ID: AZ-305
  Issued by: Microsoft
- **PMP Certified: Project Management Professional (PMP)®**
  Credential ID: PMP
  Issued by: **PMI**
- **Acquia Certified Developer - Drupal 11**
- **Issued by: Acquia**

SUMMARY OF QUALIFICATIONS

- Senior Software Engineer, Technical Architect, and **Drupal** Specialist with **14+** years of hands-on experience in designing, developing, architecting, and supporting enterprise-scale content management and web application platforms. Extensive experience working across **Drupal** 6 through Drupal 11, with deep expertise in custom module development, theming, site building, migrations, performance tuning, security hardening, and production support.
- Identity, Security & API Testing Extensive experience implementing and supporting Single Sign-On (SSO) and identity integrations using industry-standard platforms and protocols, including **Okta**, **SimpleSAMLphp**, OAuth 2.0, OpenID Connect (OIDC), and SAML 2.0, ensuring secure authentication, authorization, and seamless user access across enterprise applications. Strong hands-on experience with API development and testing using tools such as **Postman**, browser-based API testing utilities, and validating integrations across environments. Proven experience conducting cross-browser and cross-device testing using platforms such as **BrowserStack** to ensure functional, performance, and compatibility standards across multiple devices and operating systems.
- Strong backend development background with PHP 5.x through **PHP** 8.4, including modern frameworks such as **Symfony** and **Laravel**, along with experience across multiple **CMS** platforms including **WordPress**, **UNA** CMS, **Sitecore** CMS, and Adobe Experience Manager (**AEM**) at the enterprise architectural level.
- Proven full-stack expertise leveraging **JavaScript**, Node.js, **Angular** (versions 9 through 18), **React**, and modern frontend technologies to build responsive, accessible, and scalable applications, including decoupled and headless Drupal architectures using REST and API-driven integrations.
- Hands-on experience across the entire software development lifecycle (**SDLC**), including requirements analysis, system design, development, testing, deployment, operations, maintenance, and 24/7 production support, within Agile (**Scrum**) and Waterfall delivery models.
- Extensive experience with version control and collaboration tools, including **Git**, SVN, **GitLab**, and **Bitbucket**, and with cloud-hosted CMS platforms such as Acquia and Pantheon, as well as Microsoft Azure and AWS for application hosting, CI/CD, and infrastructure support.
- Strong experience in release and deployment management, including defining and enforcing Git branching strategies (feature, release, hotfix, and mainline), coordinating environment promotions (DEV, QA, UAT, PROD), executing production deployments, and managing Change Advisory Board (**CAB**) processes, approvals, rollback planning, and post-release validation in regulated enterprise environments.
- Extensive experience in technical and functional documentation, including creation of run books, as-is and future-state analysis documents, **architecture** diagrams, business and system flow diagrams, ER diagrams (**ERD**), deployment guides, operational manuals, and knowledge transfer documentation to support development, operations, and long-term product sustainability
- Enterprise **ERP** & Reporting Systems Experience. Extensive experience working with enterprise ERP systems including Pointman ERP, Aptean (Made2Manage ERP), **SAP**, and SAGE ERP, supporting end-to-end development, system enhancements, integrations, reporting, and production support. Strong background in enterprise reporting and analytics, utilizing tools such as Crystal Reports, Minitab, SAP BusinessObjects, QlikView, Qlik Sense, Power BI, and Tableau to deliver operational, financial, and executive-level insights.
- Enterprise Platforms, Integrations & Tooling Hands-on experience working with a broad range of enterprise platforms, integrations, and supporting technologies, including Google Analytics, Google Tag Manager, **Cookiebot**, and **SEO**/compliance tooling; Duda Mobile for mobile-first content delivery; Redis and

Memcached for caching and performance optimization; Solaris-based environments; **Akamai** CDN for edge caching and performance/security acceleration; **Salesforce** and **Marketo** for **CRM** and marketing automation integrations; and URL management, redirection, and shortening solutions (**SURL**). Proven ability to integrate, configure, optimize, and support these tools within complex, high-traffic, and compliance-driven application ecosystems.

- .**NET** Application Development & Support Proven experience delivering end-to-end .**NET**-based application development and support, including requirements analysis, architecture design, development, enhancement, testing, deployment, and ongoing production support. Strong knowledge of **C#,** ASP.NET, .NET Core, REST services, and database-driven enterprise applications, with a focus on stability, performance, and maintainability.
- **Mainframe** Development & Support Solid experience in mainframe application development and production support, with a thorough understanding of **COBOL**, **JCL**, and DB2. Hands-on involvement in batch processing, job scheduling, database interactions, troubleshooting, and maintaining mission-critical legacy systems within regulated enterprise environments.
- Actively leverage AI tools, ChatGPT, and advanced prompt engineering as part of day-to-day development and architectural workflows to improve productivity, accelerate troubleshooting, optimize code quality, and enhance technical documentation
- Served in multiple roles including Software Engineer, Senior Developer, Technical **Lead**, Solution **Architect**, **Release** Manager, and Project Manager, with demonstrated ownership of end-to-end delivery, including development lifecycle management, release governance, operational stability, and product lifecycle management.

Tools and Technologies

Programming Languages	: PHP 5.x–8.4, C#, Java, Python, JavaScript (ES2023+), TypeScript, SQL, PL/SQL, COBOL, JCL, GraphQL, Bash/Shell
CMS Platforms	: Drupal 6–11 (Expert), WordPress, Adobe Experience Manager (AEM), Sitecore, UNA CMS, Headless / Decoupled CMS Architectures
Backend Frameworks	: Symfony (Drupal Core), Laravel, .NET Core / ASP.NET, Spring Boot, Spring Microservices, Hibernate, NextJS
Frontend & UI Engineering	: Angular 9–18, React (Hooks, Context, Redux), Micro-frontend Architecture, Material UI, Bootstrap 5+, Tailwind CSS and HTML
API & Integration Technologies	: REST, JSON: API, GraphQL, Webhooks, Event-driven integrations, API Gateway patterns
Identity, Security & Access (SSO/IAM)	: Okta, SimpleSAMLphp, OAuth 2.0, OpenID Connect (OIDC), SAML 2.0, Role-based & Policy-based access control
Cloud Platforms & Hosting	: Microsoft Azure (Certified), AWS (EC2, S3, SQS, Lambda), Acquia Cloud, Pantheon, Hybrid Cloud Architectures
Containers & Runtime Environments	: Docker, Lando, WSL, Linux Containers, Solaris, Unix
CI/CD, Release & Governance	: Git (Advanced branching), GitLab CI, Azure DevOps, Jenkins, Release Management, CAB Process, Blue-Green & Rollback Strategies
Caching, CDN & Performance	: Redis, Memcached, Varnish, Akamai CDN, Edge caching & performance tuning
Databases (Relational & NoSQL)	: MySQL, PostgreSQL, SQL Server, Oracle, DB2, MongoDB, DynamoDB, Cosmos DB, Redshift
Enterprise ERP Systems	: SAP, SAGE ERP, Made2Manage ERP, Pointman ERP
Reporting, BI & Analytics	Power BI, Tableau, SAP BusinessObjects, Crystal Reports, QlikView, Qlik Sense, Minitab
Observability & Quality	: SonarQube, ESLint, Application performance monitoring (APM concepts), Log analysis
Testing & Validation	: Postman, API contract testing, Browser-based API tools, BrowserStack, JUnit, Mockito, Jest, Mocha, Chai
Marketing, Compliance & Analytic	: Google Analytics 4, Google Tag Manager, Cookiebot, Salesforce, Marketo
Mainframe Platforms	: IBM Mainframe, COBOL, JCL, DB2, Batch Processing, Production Support
Product, Documentation & Architecture	: Run Books, As-Is / Future-State Docs, Architecture Diagrams, ERD,

Business & System Flow Diagrams
Delivery Models & Product Ownership : Agile (Scrum), SAFe exposure, Waterfall, End-to-End Product Lifecycle Management
AI-Augmented Development (2026) : ChatGPT (Expert), Prompt Engineering, AI-assisted debugging, refactoring, documentation & test generation
Collaboration & Productivity : JIRA, Rally, Confluence, GitHub, Bitbucket, Service Now, Service Desk, service Desk Plus

PROFFESIONAL SUMMARY

Federal-Center for Medicaid & Medicare (Enterprise Privacy Policy Engine (EPPE), Baltimore, MD) Aug 2024 - PRESENT

Tech Lead Web Developer/ Systems Engineering

Responsibilities:

- Lead hands-on development and enhancements for Enterprise Privacy Policy Engine(**EPPE**), one of the most complex, custom, high-traffic Drupal 10 application portals, supporting Medicaid operations.
- Implemented custom workflows, role-based access control (**RBAC**), and media-dispositioning processes, ensuring compliance, security, and smooth user operations.
- Developed custom modules, components, and UI/UX themes based on design specifications, including feature-rich dashboards, dialog forms, and interactive workflow screens.
- Redesigned global features of the EPPE portal, including **PDF generation** tools, advanced **search** functionality, filtering mechanisms, and cron-based automated notifications for DUA policies.
- Configured daily cron jobs for alert generation, managing renewal notifications at 15, 30, 45, and 60-day intervals, ensuring end users received timely updates.
- Delivered performance optimization and security hardening, following **Drupal 10** and PHP 8.4 best practices across multiple environments.
- Managed end-to-end release management, including Docker/DDEV development environments, Git branching strategies, Jenkins pipeline orchestration, and tag-based deployments.
- Oversaw **AWS**-based deployments, including **Kubernetes containerization**, ensuring scalable, reliable, and monitored production systems.
- Coordinated UAT and production deployments, maintaining clear communication with stakeholders and DevOps teams to ensure zero downtime and smooth release cycles.
- Implemented role-based workflow enhancements, supporting complex approval hierarchies, automated task routing, and fine-grained permissions across EPPE functionalities.
- Developed custom alerting, logging, and monitoring solutions, integrating with email systems and reporting tools to track critical EPPE operations and exceptions.
- Conducted thorough code reviews, unit testing, and functional testing, ensuring high-quality, maintainable, and secure code across the Drupal 10 platform.
- Mentored junior developers and led cross-functional teams, ensuring consistent adherence to coding standards, security protocols, and best Drupal and architectural practices.

Tech Stack: Drupal 10, PHP 8.4, Docker, DDEV, Kubernetes, Jenkins, AWS (EC2, S3, RDS, Lambda), Git, HTML5, CSS3, JavaScript, REST APIs, Jira

State of New York-Depart of Corrections (NYDOCCS), Albany, NY) Aug 2023 – July 2024

Tech Lead Web Developer/ Systems Engineering

Responsibilities:

- Provided technical leadership for the DOCCS web portal ecosystem, overseeing full lifecycle development, maintenance, and modernization of mission-critical applications.
- Directed migration of legacy portal components to contemporary Drupal 9 architecture, ensuring operational continuity, compliance, and performance optimization.
- Engineered and deployed custom Drupal modules, components, and themes, aligning with evolving business requirements and improving usability for end-users.
- Instituted robust testing frameworks, including unit, functional, and regression testing, to maintain high-quality, production-ready releases.
- Implemented security and governance enhancements, enforcing role-based access controls, authorization

workflows, and compliance with state and federal regulations.

- Led CI/CD deployment pipelines on Acquia Cloud and Git workflows, establishing end-to-end environment orchestration across DEV, QA, UAT, and PROD.
- Collaborated with cross-functional teams, including business analysts, QA, and infrastructure teams, to translate requirements into scalable and maintainable solutions.
- Conducted performance tuning, troubleshooting, and system optimization, ensuring high availability, fast response times, and reliability for all portal users.
- Provided mentorship and guidance to junior developers on Drupal best practices, multi-site management, and modular component development.
- Oversaw integration with external systems and APIs, ensuring seamless data exchange, enhanced functionality, and compliance with DOCCS operational standards.

Tech Stack: Drupal 9, PHP 7–8, Acquia Cloud, Acquia BLT, REST APIs, Multi-site Management, Git, Jira, CI/CD Pipelines, Security & Access Management, Unit & Functional Testing

State of California-County of San Bernadino (ITSD), San Bernadino, CA) Aug 2022 – July 2023

Tech Lead Web Developer/ Systems Engineering

Responsibilities:

- Led the migration of multiple legacy PHP portals from NGINX servers to IIS, including complex portals like Register-to-Vote, eDocs, Worker Payroll, Affidavit, User Management, and ROV Intranet.
- Conducted reverse engineering and reconciliation of legacy PHP applications into .NET Core 6, followed by upgrades to latest .NET Core LTS versions.

- Modularized large applications, isolating sub-modules as standalone services or Global API-first microservices, based on project requirements.
- Developed and supported Angular-based components for legacy portals, implementing security enhancements, feature improvements, and UI updates.
- Provided hands-on maintenance, enhancements, and operational support for Drupal, WordPress, PHP, .NET, and Angular applications to ensure continuity and performance across multiple county portals.
- Implemented secure workflows, role-based access controls, and applied security best practices to meet county compliance standards.
- Designed and executed end-to-end migration and integration plans, including unit testing, functional testing, and deployment validation.
- Set up Azure environments from scratch: Dev, Test, UAT, and Prod, including Azure Pipelines, Git Actions, and CI/CD workflows for automated deployments.
- Led full Azure DevOps integration: pipeline creation, build and release configuration, automated testing, and deployment tracking.
- Collaborated with cross-functional teams to troubleshoot production issues, perform bug fixes, and ensure alignment with county IT standards.
- Mentored team members on modern .NET Core practices, Angular development, API-first development, and portal modernization strategies.
- Supported CI/CD and release management, ensuring smooth deployment and rollback strategies across all environments.

Tech Stack:.NET Core 6 & LTS, C#, ASP.NET MVC, Angular 7+, PHP 5–8, Drupal 7/8/9, WordPress, IIS, NGINX, SQL Server, MySQL, Azure DevOps, Azure Pipelines, Git, Git Actions, REST APIs, Microservices, Unit Testing, Functional Testing, Security Hardening

State of New York-Depart of Transportation (NYDOT), Albany, NY) June 2021 – July 2022

Tech Lead Web Developer/ Systems Engineering

Responsibilities:

- Led development, migration, and enhancement of the Governor's legacy **Drupal 7** portal (2009 build) to Drupal 9 on **Acquia** Cloud, modernizing architecture for performance, security, and maintainability.
- Implemented Storybook upgrades, component dependency fixes, and portal enhancements for both legacy and current systems.
- Major contributor to the Universal Navigation (**UNAV**) project, supporting ~**8,000** subdomains across NY state portals, including Department of Transportation (**DOT**), Department of Motor Vehicles (**DMV**), and Civil Service Employee Association (**CSEA**), standardizing header, footer, and navigation components.

- Developed and integrated multi-language translation functionality across legacy and new systems to meet accessibility and localization standards.
- Migrated and optimized legacy components of the Governor portal, ensuring modern UI/UX design, responsiveness, and cross-browser compatibility.
- Executed enhancements, bug fixes, and performance optimization for DOT, DMV, and CSEA portals, ensuring consistent functionality and high availability.
- Managed Acquia pipelines for CI/CD, deployment, and release management, including DEV → QA → UAT → PROD promotion, rollback planning, and post-deployment validation.
- Collaborated with a team of 12 developers, mentoring Drupal 9 best practices, multi-site management, and Acquia deployment workflows.
- Ensured scalability, security compliance, and accessibility (WCAG 2.1) standards across all portals.

Tech Stack: Drupal 7 and 9, PHP 7–8, Acquia Cloud, Acquia BLT, ACSF, Storybook, React Components, Multi-site Management, REST APIs, MySQL, Git, Jira, CI/CD Pipelines, Unit & Functional Testing, Translations, Accessibility Compliance

Moodys Financial, Manhattan, Ny) **June 2020 – May2021**

Tech Lead Web Developer/ Systems Engineering

Responsibilities:

- Lead and support the IT Systems Integration Scrum Team, analyzing and grooming user stories for modernization of legacy Portal applications with a focus on UI, performance, and scalability.
- Architected, developed, and maintained enterprise **Drupal** applications (**Drupal** 9 & 10), including custom modules, themes, plugins, administrative views, RESTful services, and third-party integrations.
- Containerized **Drupal** 9 and 10 applications using Docker, enabling consistent local development, CI/CD workflows, and streamlined deployments across environments.
- Drupal migrations from Drupal 7 → 8 → 9 → 10 on Acquia Cloud, ensuring minimal downtime, data integrity, and compliance with security standards.
- I acted as Release Manager, owning end-to-end release cycles across DEV, QA, UAT, and PROD, including Git branching strategy, managing Change Advisory Board (**CAB**) approvals, core and security updates, rollback planning, and post-deployment validation.
- Designed and implemented partially decoupled Drupal architecture, integrating React-based frontends as primary consumers, with backend services hosted on AWS and Acquia Cloud.
- Developed single-page applications (SPA) using React, TypeScript, Redux, React Hooks, and React Router, focusing on performance, scalability, and maintainability.
- Implemented server-side rendering (SSR) solutions using Node.js, TypeScript, and GraphQL to deliver financial summary dashboards for executive (CFO) stakeholders.
- Built and integrated Angular services (Angular 7+), including REST API consumption, reactive forms, validation, and component-based architecture.
- Led performance optimization initiatives, including database partitioning strategies and caching, resulting in ~25% reduction in page load times for high-traffic applications.
- Installed, configured, and integrated **Drupal** 10 environments with **Okta** (SSO), Box, and Splunk, across on-premises and cloud (Pantheon, Acquia) environments.
- Served as Accessibility Subject Matter Expert (SME), ensuring ADA and WCAG 2.1 compliance across internal and public-facing websites, documents, and media.
- Conducted regular accessibility audits using Axe, WAVE, and Lighthouse, and implemented remediation strategies for web content, PDFs, Word, and PowerPoint documents.
- Collaborated closely with UX/UI and Design teams to deliver custom Drupal themes using Atomic/Fractal Design patterns, Pattern Lab, and **Storybook**.
- Designed and developed responsive WordPress websites using HTML5, CSS3, JavaScript, and **PHP** 7.x–8.x, ensuring cross-browser compatibility and accessibility compliance.
- Managed and supported AWS infrastructure, including EC2, ELB, S3, RDS, Route53, VPC, Auto Scaling, IAM, CloudWatch, and Lambda, aligned with security and performance best practices.
- Deployed containerized microservices using Docker on AWS EC2 and ECS, supporting scalable and resilient application architectures.
- Participated in development of REST services using Spring Boot, supporting backend integration needs.

- Led production support, maintenance, and enhancements, resolving **Drupal** and application issues, managing change requests, and ensuring platform stability.
- Mentored junior developers, conducted code reviews, and enforced coding standards, security practices, and architectural consistency across teams.
- Supported enterprise branding and UI transformations following organizational acquisitions, ensuring consistency across customer-facing and internal applications.

Tech Stack: Drupal 9/10, PHP 7–8, React, TypeScript, Redux, Angular, Node.js, GraphQL, Docker, AWS (EC2, S3, RDS, Lambda, Route53), Acquia Cloud, Okta, Spring Boot, REST APIs, Git, Jira, Material UI, HTML5, CSS3, JavaScript

CALTRANS (State of California Dept of Transportation) **NOV 2019 – June 2020**

Lead we Developer / Enterprise Architect

Responsibilities:

- Served as a hands-on Lead Web Developer responsible for designing, developing, enhancing, and supporting large-scale PHP-based web portals and enterprise CMS platforms used by the State of California.
- Actively developed and maintained Drupal 7, Drupal 8, and Drupal 9 applications, including custom modules, services, hooks, plugins, and configuration management, supporting both public-facing and internal government portals.
- Designed, developed, and supported WordPress-based applications and content-driven websites, building custom themes, plugins, and reusable components using PHP 7/8, JavaScript, and MySQL.
- Performed end-to-end hands-on PHP development across multiple applications, including backend business logic, API integrations, database interactions, and performance optimization.
- Led and executed migration, enhancement, and modernization efforts for legacy PHP applications and CMS platforms, ensuring scalability, security, and maintainability.
- Owned full SDLC execution for Drupal and WordPress projects—from requirement analysis and architecture to coding, testing, deployment, and production support.
- Created AS-IS and TO-BE technical documentation for PHP, Drupal, and WordPress platforms, including architecture diagrams, data flows, ERDs, business workflows, and gap analysis.
- Performed hands-on ADA/WCAG 2.0 & 2.1 remediation on PHP-based websites, Drupal portals, and WordPress applications, directly fixing accessibility issues in code and templates.
- Conducted manual and automated accessibility testing and implemented fixes using semantic HTML5, ARIA roles, keyboard navigation, and screen-reader support.
- Developed custom Drupal themes using Atomic/Fractal design patterns, ensuring responsive layouts, reusable UI components, and consistent branding.
- Built custom integrations between PHP/**Drupal/WordPress** applications and third-party systems, handling authentication, data exchange, and error handling.
- Hands-on with bug fixes, enhancements, change management, and feature delivery across **PHP**-based portals and **CMS** applications.
- Implemented and supported CI/CD pipelines using SVN, **Jenkins**, and scripted deployments, promoting code through Dev, QA, UAT, and Production environments.
- Provided production support for mission-critical government portals, diagnosing and resolving live issues, including Sev-1 incidents.
- Developed data migration scripts and custom Drupal modules to migrate content and records from legacy systems into modern Drupal and WordPress platforms.
- Built React and Angular UI components integrated with PHP/Drupal backends, implementing REST and GraphQL-based data exchange.
- Ensured cross-browser and cross-device compatibility for all PHP, Drupal, and WordPress applications.
- Worked directly in AWS environments, supporting hosting, storage, and integrations for PHP-based applications.
- Mentored developers through hands-on code reviews, pair programming, and architecture walkthroughs, ensuring coding standards and best practices.

Tech Stack: PHP 7/8, Drupal 7/8/9, WordPress, MySQL, JavaScript, TypeScript, React, Angular, GraphQL, Spring Boot, Jenkins, CI/CD, AWS S3, SVN, Pantheon, Acquia, Terminus, Drush, Docker, Lando, WSL

VYAIRE MEDICAL (PALM SPRINGS, CA) **Nov 2018 –Nov2019**

Project Lead/Web APPLICATIONS support Engineer

Responsibilities:

- Led cross-functional teams across technical, business, and operational domains, ensuring projects were delivered on time, within budget, and meeting objectives.
- Provided hands-on support and development for PHP-based corporate portals, **Drupal** 6/7/8/9 applications, **WordPress**, Adobe Experience Manager (**AEM**), and **Sitecore** platforms, including custom modules, themes, plugins, RESTful API integrations, and decoupled/headless implementations with **React** and **Angular**.
- Owned full lifecycle management of enterprise web applications, from requirements analysis, architecture, coding, testing, deployment, to production support.
- Managed P1–P4 incidents, SLA communications, and coordinated with vendors (AWS, Microsoft Azure, Aptean ERP, Horizon support) and third-party providers to ensure system uptime and business continuity.
- Developed, deployed, and supported **ERP** integrations, including **Pointman** ERP, Made to Manage ERP, SAP, SAGE ERP, handling enhancements, reporting, and troubleshooting; integrated with reporting tools such as **Crystal** Reports, SAP BusinessObjects, **QlikView**, Qlik Sense, Power BI, and Tableau.
- Designed and implemented **ADA**/WCAG-compliant websites, auditing and remediating PDFs, forms, multimedia content, and ensuring accessible user experiences for all users.
- Built responsive front-end solutions using **HTML5**, **CSS3**, SASS/LESS, Bootstrap/Foundation, JavaScript, jQuery, Angular (7+), React JS, and TypeScript, creating reusable UI components and single-page applications.
- Conducted code reviews, mentoring, and training sessions for onshore and offshore developers, promoting Drupal best practices, code quality, and reusable architecture patterns.
- Managed version control and CI/CD workflows using Git, Jenkins, pipelines, and containerized development environments (**Docker**, **Docksal**, **Lando**, **WSL, DDEV**).
- Integrated and tested **analytics** and marketing tools, including Google Analytics, Google Tag Manager, **Cookiebot**, and implemented tracking and reporting across web properties.
- Developed custom scripts and automation to streamline processes, optimize performance, and ensure consistency across enterprise CMS platforms.
- Hands-on with **ASP.NET/C#** modules, supporting and enhancing web-based security and physical access systems using MS Visual Studio.
- Performed quality assurance, regression testing, UAT, and cross-device/browser testing to ensure optimal performance and user experience.
- Collaborated closely with UX/UI designers and business stakeholders to implement modern, accessible, and high-performance web solutions.

Tech Stack: Drupal 6/7/8/9, WordPress, AEM, Sitecore, PHP 5–8, JavaScript, TypeScript, Angular 7–11, React JS, Node JS, Redux, RESTful APIs, PostgreSQL, MySQL, NoSQL, Docker, Docksal, Lando, WSL, Jenkins, CI/CD pipelines, Git, Jira, Salesforce, Marketo, Crystal Reports, SAP BusinessObjects, QlikView, Qlik Sense, Power BI, Tableau, Google Analytics, Google Tag Manager, Cookiebot, HTML5, CSS3, SASS/LESS, Bootstrap/Foundation

FLUKE CORPORATION (EVERETT WA) **June 2018 – Nov 2018**

Project Lead/ Web Architect

Responsibilities:

- Led end-to-end architecture, development, and maintenance of **Drupal**-based enterprise applications, including **Drupal** 6 → 7 → 8 upgrades, content migration, module/theme development, and security patch management.
- Developed custom, responsive front-end interfaces using React JS (Forms, Events, Keys, Router, Animations, Flux) for both desktop and mobile devices, creating single responsive web experiences.
- Migrated key applications from legacy Windows **CMS** to **Drupal** 6/7/8, improving performance, functionality, and maintainability.
- Integrated marketing, analytics, and tracking tools, including **Marketo**, **Salesforce** (SFDC), Cookiebot, Dotcom Monitor, Google Analytics, Google Tag Manager, and Translations.com.
- Designed responsive, mobile-first layouts using **HTML5**, **CSS3**, and media queries optimized for iPhone, iPad, Android, tablets, and desktop devices.
- Managed source control and deployments using Git, Bitbucket, Jira for task/bug tracking, and DMR tools for production deployment, working closely with **DevOps** teams.
- Led a 35-member cross-functional, multi-country team (**onsite**/**offshore**) including developers, content

editors, designers, full-stack engineers, **Salesforce**, and Marketo specialists.

- Assisted regional properties in annual IT capital planning, project prioritization, and reporting on budget vs. actual spend.
- Oversaw large-scale project roadmaps, communicating **Drupal** and web upgrades to stakeholders and regional teams.
- Championed **ADA**/WCAG 2.1 compliance for public-facing websites, personally auditing sites and leading remediation efforts to ensure accessibility for visually impaired users.
- Delivered training programs on accessibility and **Drupal** best practices to over 50 web developers and content editors, achieving 100% compliance for new content.
- Worked in **Pantheon** hosting environments, with additional deployments on Azure and AWS for legacy and hybrid systems.

Tech Stack: Drupal 6/7/8, WordPress 3/4, PHP 5–7, JavaScript, React JS, Angular, jQuery, MySQL, NoSQL, Jenkins, CI/CD Pipelines, Pantheon, AWS, Azure, Salesforce, Marketo, Git, Bitbucket, Jira, HTML5, CSS3, SASS/LESS, Responsive Design

State of New York-Depart of Transportation (NYDOT), Albany, NY) **June 2017 – June 2018**

Tech Lead Web Developer/ Systems Engineering

Responsibilities:

- Led development, migration, and enhancement of the Governor's legacy **Drupal 7** portal (2009 build) to Drupal 9 on **Acquia** Cloud, modernizing architecture for performance, security, and maintainability.
- Implemented Storybook upgrades, component dependency fixes, and portal enhancements for both legacy and current systems.
- Major contributor to the Universal Navigation (**UNAV**) project, supporting ~**8,000** subdomains across NY state portals, including Department of Transportation (**DOT**), Department of Motor Vehicles (**DMV**), and Civil Service Employee Association (**CSEA**), standardizing header, footer, and navigation components.
- Developed and integrated multi-language translation functionality across legacy and new systems to meet accessibility and localization standards.
- Migrated and optimized legacy components of the Governor portal, ensuring modern UI/UX design, responsiveness, and cross-browser compatibility.
- Executed enhancements, bug fixes, and performance optimization for DOT, DMV, and CSEA portals, ensuring consistent functionality and high availability.
- Managed Acquia pipelines for CI/CD, deployment, and release management, including DEV → QA → UAT → PROD promotion, rollback planning, and post-deployment validation.
- Collaborated with a team of 12 developers, mentoring Drupal 9 best practices, multi-site management, and Acquia deployment workflows.
- Ensured scalability, security compliance, and accessibility (WCAG 2.1) standards across all portals.

Tech Stack: Drupal 7 and 9, PHP 7–8, Acquia Cloud, Acquia BLT, ACSF, Storybook, React Components, Multi-site Management, REST APIs, MySQL, Git, Jira, CI/CD Pipelines, Unit & Functional Testing, Translations, Accessibility Compliance

Nutrien-Healthcare (Loveland, CO) **Jan 2017 – June 2017**

Tech Lead Web Developer/ Systems Engineering

Responsibilities:

- Led end-to-end development, enhancement, and maintenance of Nutrien's legacy PHP-based portals and SHIPERP **ERP** application.
- Nutrien is a leading global agriculture company, providing crop inputs, services, and digital solutions to farmers and agribusinesses worldwide. **SHIPERP** is Nutrien's custom **ERP** (Enterprise Resource Planning) application used for managing supply chain, inventory, logistics, and business operations across multiple divisions.
- Upgraded legacy applications from **PHP** 5.3 to PHP 7.4, ensuring performance improvements, security compliance, and long-term maintainability.
- Worked on WAMP and Azure hosting environments, managing deployment, configuration, monitoring, and troubleshooting of multiple non-production and production instances.
- Implemented feature enhancements, custom workflows, and role-based access controls, aligning with business requirements and prototypes provided by Nutrien.
- Developed, tested, and deployed **AWS** Lambda functions using **Python** and libraries to support **ERP**

processes, automated reporting, and portal integrations.

- Performed database integration, optimization, and error resolution for **MySQL** and **SQL** Server supporting SHIPERP and other Nutrien portals.
- Created comprehensive documentation, runbooks, and workflow guides for ERP enhancements, upgrades, and operational procedures.
- Conducted unit testing, integration testing, and functional validation to ensure delivery of high-quality, secure, and reliable ERP and portal features.
- Coordinated with cross-functional teams to resolve dependencies, unblock issues, and ensure timely delivery of critical enhancements.
- Contributed to continuous improvement initiatives by streamlining development processes, automating repetitive tasks, and implementing best practices for CI/CD, version control, and release management.

Tech Stack: PHP 5.3–7.4, Laravel, WAMP, Azure, AWS Lambda, Python, MySQL, SQL Server, HTML5, CSS3, JavaScript, Git, CI/CD pipelines

Humana-Healthcare (Louisville, KY) **July 2016 – Jan 2017**

Tech Lead Web Developer/ Systems Engineering

Responsibilities:

- Served as technical lead for a highly complex, API-driven Drupal project integrated with Apigee, overseeing enhancements, workflow design, and feature implementation.
- Apigee, a leading API management platform, was used to securely expose, monitor, and manage APIs between Drupal and other enterprise systems, ensuring scalable, controlled, and reliable communication.
- Led Drupal migration from Drupal 8 → 9, including redesign and re-architecture of the legacy portal migrated from Magento CMS.
- Developed and maintained custom modules and role-based access control (RBAC) workflows, enforcing granular permissions, menu behaviors, and feature visibility based on user roles.
- Designed and implemented custom views, menus, and content workflows, ensuring precise alignment with project specifications and business requirements.
- Managed downtime handling and failure scenarios, designing failover mechanisms and alerts for critical processes to ensure system reliability.
- Worked on performance optimization, monitoring high-traffic behavior, and ensuring smooth API integrations for secure and efficient data exchange.
- Built dynamic workflows and content management features, including maker-checker approval processes, automated notifications, and scheduled batch operations.
- Conducted unit testing, functional testing, and code reviews, mentoring junior developers and ensuring adherence to Drupal 9 best practices and enterprise coding standards.
- Oversaw end-to-end release management, coordinating deployments to UAT and production environments, change management communications, and pipeline automation.
- Collaborated closely with DevOps and Modernization teams to manage Azure-based deployments, monitoring, access management, and workflow automation for multiple legacy and Drupal-based applications.

Tech Stack: Drupal 8/9, PHP 8.x, Apigee (API management platform), Magento CMS, JavaScript, jQuery, HTML5, CSS3, MySQL, Docker, Azure DevOps, Jenkins, Git

Bankers-Healthcare-Group(BHG) (Davies, FL) **Jan 2016 – July 2016**

Tech Lead Web Developer/ Systems Engineering

Responsibilities:

- Led hands-on development, modernization, and support of multiple legacy PHP application portals, including Drupal 8, WordPress, Laravel 5, Symfony 5, and .NET Core applications, ensuring stability, scalability, and performance across production environments.
- Designed, implemented, and maintained end-to-end release management pipelines on Azure and GitHub, including DEV, TEST, UAT, and PROD environments, with full integration of monitoring, alerts, and access management.
- Directed component-based development for brand new Java-based CMS applications (Adobe Experience Management), implementing reusable UI components, performing unit testing, feature development, and integration with existing Drupal and PHP systems.
- Developed and maintained data processing workflows, logic apps, and bulk update scripts to handle

application process automation, error logging, and reporting enhancements across multiple platforms.

- Implemented accessibility fixes, security patches, and compliance improvements across internal and customer-facing applications, ensuring adherence to WCAG 2.1 and enterprise standards.
- Supported and enhanced marketing and analytics applications, including Marketo, Salesforce CRM, SURL, and Tableau dashboards, integrating data flows, automation scripts, and reporting pipelines.
- Collaborated closely with DevOps and modernization teams to troubleshoot production issues, implement fixes, and optimize application performance across multiple hosting platforms, including Azure, AWS, Acquia Cloud, and Pantheon.
- Built and maintained custom Drupal themes and modules, integrated RESTful APIs, and extended functionality across multiple BHG sites, enabling content management, reporting, and operational efficiencies.
- Utilized Pattern Lab and Storybook to design, implement, and maintain reusable UI components, driving consistency across web applications and supporting rapid development cycles.
- Mentored junior developers, performed code reviews, and enforced coding best practices, security standards, and architectural guidelines across multiple projects and frameworks.
- Oversaw daily operational activities, including bug fixes, feature enhancements, and support tasks across a wide array of applications spanning multiple technologies, ensuring business continuity and seamless user experience.

Tech Stack: Drupal 8/9, WordPress, PHP 7–8, Laravel 5, Symfony 5, .NET Core, MongoDB, Java, Adobe Experience Manager, Azure (Functions, Pipelines, Monitoring), GitHub, Bitbucket, Pattern Lab, Storybook, REST APIs, Marketo, Salesforce CRM, SURL, Tableau Dashboards, HTML5, CSS3, JavaScript, jQuery

State of California-Judicial Council of California (JCIT), San Francisco, CA **Jan 2016 – July 2016**

Tech Lead Web Developer/ Systems Engineering

Responsibilities:

- Led hands-on architecture, development, and modernization of a large-scale Drupal multisite platform hosted on Pantheon, supporting a single global platform serving 58 California courts.
- Executed Drupal 8 to Drupal 9 migrations, including core upgrades, contributed module remediation, custom module refactoring, and compatibility validation across all court sites.
- Actively developed and enhanced custom Drupal features for day-to-day business needs, including Newsroom functionality, site-wide improvements, content workflows, and performance optimizations.
- Played a key hands-on role in building a brand-new frontend component system using Storybook, implementing component-driven development aligned with provided UX/UI designs.
- Designed, built, and integrated reusable UI components such as headers, footers, navigation menus, logos, sidebars, layout components, and shared UI elements, and seamlessly integrated them with Drupal theming and content structures.
- Worked component-by-component to translate design specifications into production-ready Drupal components, ensuring consistency, scalability, and accessibility.
- Integrated Storybook-based components into Drupal themes, enabling design-system-driven development and improved collaboration between design and engineering teams.
- Performed unit testing and functional testing to validate component behavior, Drupal features, and regression scenarios across multisite deployments.
- Led and supported release management activities, including deployment coordination, validation across environments, and production rollout support.
- Provided hands-on development and support for additional Drupal and WordPress sites, including the **eHelp** portal, addressing enhancements, bug fixes, and major/minor version upgrades.
- Supported non-Drupal applications by assisting with Azure configuration, CI/CD setup, and deployments using Azure Pipelines.
- Ensured compliance with state security standards, governance policies, and accessibility requirements, including Section 508 and WCAG guidelines.
- Collaborated closely with court stakeholders, UX teams, and cross-functional engineers while remaining directly responsible for core code delivery and technical execution.

Tech Stack: Drupal 8/9, PHP 7–8, Storybook, Twig, JavaScript (ES6), HTML5, CSS3, Pantheon, WordPress, Composer, Drush, Git, Jira, Azure Pipelines, Unit Testing, Functional Testing, WCAG / Section 508 Compliance

Federal-Center for Medicaid & Medicare (Medicaid.gov & Insurekidsnow.gov), Baltimore, MD) Sept 2015 – Jan 2016

Tech Lead Web Developer/ Systems Engineering

Responsibilities:

- Served as Universal Lead, overseeing four major projects simultaneously: Medicaid.gov, InsureKidsNow.gov, Scorecard, and Modernization, ensuring seamless coordination across development, deployment, and enhancements.
- Lead day-to-day development, enhancements, and integrations for enterprise Drupal 9.5.x applications, ensuring compliance with performance, security, and accessibility standards.
- Drove modernization initiatives, including Google Search enhancements, overall site redesigns, visitor segmentation, Mega Menu, Blog Posts, and UI/UX improvements aligned with provided designs.
- Solely responsible for release management across DEV, UAT, and PROD environments, including Acquia Cloud deployments, alert monitoring, auto-scaling for high-traffic (50+ state coverage), and change management communications.
- Led single sign-on (SSO) enhancements using Miniorange and SimpleSAML PHP, implementing secure and streamlined user authentication for multiple portals.
- Implemented robust testing practices, including unit testing, Behat functional tests, smoke testing, and code reviews, mentoring junior developers to maintain high-quality and maintainable code.
- Conducted documentation and process management, including branching strategies, critical fix procedures, workflow documentation, onboarding guides, and detailed release notes for complex enhancement projects.
- Oversaw high-traffic performance and infrastructure optimization, including Drutiny reports for security, accessibility, and Drupal best practices, along with auto-scaling, monitoring, and alert management for cloud-hosted Drupal applications across Acquia and Azure platforms.
- Implemented accessibility fixes and ensured HTTP compliance (502/503 readiness) according to Drupal best practices and enterprise operational standards.
- Developed and extended custom Drupal themes, modules, administrative views, RESTful services, and APIs, integrating modern component-based development using Storybook, React, and Angular.
- Coordinated with cross-functional teams including DevOps, Modernization, and Scorecard teams, ensuring development aligns with business objectives, sprint goals, and regulatory requirements.
- Drove complex feature development and workflow enhancements, including role-based access, critical fixes, and major UI/UX enhancements for large-scale federal portals.

Tech Stack: Drupal 9/10, PHP 7–8, React, Angular, Storybook, Acquia Cloud, Azure, AWS (EC2, S3, RDS, Lambda), Miniorange SSO, SimpleSAML PHP, Docker, DOCSAL, DDEV, Git, Jenkins, Jira, Drutiny, HTML5, CSS3, JavaScript

State of Maryland-City of Baltimore (BCIT), Baltimore, MD) May 2015 – Sept 2015

Tech Lead Web Developer/ Systems Engineering

Responsibilities:

- Led end-to-end redesign and redevelopment of the BCIT public-facing portal, migrating from a legacy .NET Sitecore CMS site to Drupal 8, following the latest prototypes and client design specifications.
- Developed and enhanced Drupal content types, views, custom modules, and RESTful integrations to support complex business logic and feature requirements.
- Implemented Digital Asset Management (**DAM**) enhancements, enabling efficient media handling, document management, and PDF functionality improvements.
- Developed scorecard functionality to provide dynamic reporting and performance metrics for internal and public users.
- Integrated single sign-on (**SSO**) using **Minorange** SimpleSAMLphp, ensuring seamless and secure authentication across multiple systems.
- Created content migration scripts and batch processing workflows to handle large-scale content migration and reconciliation from legacy systems.
- Performed bug fixes, feature enhancements, and operational support for Drupal 8 applications, ensuring platform stability and performance.
- Conducted unit testing, functional testing, and QA validations to ensure proper implementation of features and compliance with client requirements.
- Mentored team members on Drupal 8 development best practices, SSO integration, content migration

strategies, and performance optimization.

- Collaborated with cross-functional teams, including UX/UI designers, backend developers, and client stakeholders, to deliver a robust and scalable public portal.

Tech Stack: Drupal 8, PHP 7–8, JavaScript, jQuery, REST APIs, SimpleSAMLphp, Minorange, MySQL, Oracle, Apache, Git, Azure DevOps, CI/CD Pipelines, Batch Processing, Unit & Functional Testing.

Thomas pharmaceuticals (Manhattan, NY) **Jan 2015 –May 2015**

Project Lead/PROJECT MANAGER

Responsibilities:

- Led and managed cross-functional teams of developers, content editors, and analysts, providing mentorship, setting direction, and delivering feedback to optimize team performance.
- Planned, coordinated, and executed enterprise Drupal projects (**Drupal** 6/7/8) from inception to deployment, ensuring on-time delivery and adherence to best practices, accessibility standards (ADA/WCAG), and client requirements.
- Managed end-to-end project lifecycle including requirement gathering, design, development, testing, deployment, and post-release support across **Drupal**, WordPress, and PHP-based applications and portals.
- Designed and implemented mobile-responsive web applications using **Bootstrap**, Adobe DTX, AEM, Duda Mobile, Bmobilezed, BOX, standardizing layouts across desktops, tablets, and mobile devices.
- Developed UI components and front-end architecture using HTML5, CSS3, JavaScript, jQuery, AJAX, with backend integration to Oracle (PL/SQL), MySQL, SQL Server, and third-party systems.
- Oversaw **CRM** and **ERP** integration within Drupal applications, including Aptean ERP, Salesforce, and custom data workflows.
- Implemented microservices and containerization using NodeJS, Docker, and Kubernetes for scalable deployments.
- Conducted risk management, maintained the master risk register, and ensured project milestones were met while mitigating potential project risks.
- Managed cloud hosting migration and environments on **Pantheon**, **Acquia**, **Azure**, and **Bluehost**, ensuring high availability and performance.
- Developed custom WordPress themes and plugins (PHP 5/7, HTML5, CSS3, Bootstrap) and maintained LAMP stack environments.
- Oversaw database architecture and development, writing stored procedures, functions, triggers, optimizing queries, and managing large datasets for multiple applications.
- Managed version control and CI/CD pipelines using Git, Bitbucket, Jenkins, and Azure DevOps, ensuring smooth releases and minimal downtime.
- Conducted stakeholder communication, requirement analysis, and project reporting, bridging the gap between business and technical teams.
- Provided training and best practices guidance for internal teams and client developers on Drupal, WordPress, and PHP-based applications.
- Ensuring all public-facing and internal applications met accessibility, security, and performance standards, with proactive monitoring and remediation strategies.

Tech Stack: Drupal 6/7/8, WordPress, PHP 5–7, HTML5, CSS3, JavaScript, jQuery, AJAX, Bootstrap 3, NodeJS, Docker, Kubernetes, Oracle (PL/SQL), MySQL, LAMP stack, CRM/ERP integrations (Salesforce, Aptean ERP), Pantheon, Acquia, Azure, Bluehost, Jenkins, Azure DevOps, Git, Bitbucket, Adobe DTX, Duda Mobile, Bmobilezed

Overseas Experience:

IBM Invesco (Hyderabad, IND) **Jan 2014 –Dec 2014**

Software Engineer

Responsibilities:

- Software Engineer | IBM Invesco | Hyderabad, India | Jan 2014 – Dec 2014
- Involved in end-to-end web application development using Ruby on Rails, with front-end built using HTML5, CSS3, jQuery, AngularJS, Blueprint CSS.
- Participated in requirements gathering, client interaction, and preparing system analysis documents.
- Developed reusable components, base classes, and framework classes for web applications.
- Conducted unit, integration, and acceptance testing, ensuring robust application functionality.
- Migrated and enhanced legacy applications from C# to Python, improving maintainability and performance.

Hyderabad Indoors(Apex Infratech) (Hyderabad, IND) **Jan 2012 –Dec 2013**

JR Web Developer

Responsibilities:

- Developed Drupal 6/7 websites, implementing caching with Drush and optimizing server response with Nginx.
- Built web pages using HTML5, CSS3, JavaScript, jQuery, AJAX, JSON, XML, following W3C standards.
- Replaced legacy procedural code with object-oriented PHP for improved maintainability.
- Collaborated with QA team on bug fixes, cross-browser compatibility, and performance improvements.

Tech Stack: Drupal 6/7, PHP 5/7, Ruby on Rails, Python 2, MySQL, Oracle, JavaScript, jQuery, AJAX, AngularJS, HTML5, CSS3, JSON, XML, Nginx, Drush

PROJECT MANAGEMENT ACUMEN

- **Technical & Project Leadership**: Led end-to-end software development projects across Drupal, .NET, and Mainframe environments; managed cross-functional teams, sprints, releases, and deployments using Agile (Scrum) and Waterfall methodologies.
- **Release & Change Management**: Oversaw Git branching strategies, CI/CD pipelines, production deployments, CAB approvals, and security patch management while ensuring timely delivery and minimal downtime.
- **Risk & Quality Oversight**: Conducted risk assessments, code reviews, accessibility (WCAG 2.1) audits, and QA validation; implemented process improvements to enhance team productivity and product quality.
- **Stakeholder & Resource Management:** Collaborated with business owners, clients, and offshore teams; managed budgets, timelines, and resource allocation; communicated project progress using Jira, Azure DevOps, and dashboards.

Hobbies & Interests

- Volunteer work supporting community initiatives and non-profit organizations.
- Culinary arts: experimenting with recipes and exploring new cuisines.
